

A promotional banner for a webinar. It features a red "WEBINAR" button on the left, a cartoon illustration of a person on a laptop in the center, and the text "ManageEngine | SAMSUNG Advancing endpoint management and security" in the middle. On the right, there is a yellow "Register now" button.

SCCM Log Files Updated List Client and Server

Last Updated: March 31, 2022 by Anoop C Nair

This post will know more about **SCCM Log Files Updated List for Client and Server**. Get the latest or updated list of SCCM Logs. The Configuration Manager logs are essential to troubleshoot an issue and fix those.

Configuration Manager's current branch and later versions of clients are installed with the built-in log reader tool CMTrace.exe. But there are newer or new SCCM Logs reading tools with the latest versions of SCCM.

Microsoft ConfigMgr Logs details are given in the last section of this post. Both the server and client-side SCCM logs file details are explained in this post.

In this post, you will see the **client-side** and **server-side** SCCM logs. SCCM Logs are your best friend in Troubleshooting issues.

SCCM logs are generated on the client and site server-side. The client and server components record process information in individual log files. The more detailed log files also can be produced by [enabling debug or verbose mode](#).

The SCCM log files are identified by **.log** or **.lo_** file extensions. ConfigMgr writes to a .log file until that log reaches its maximum size.

Client-Server communication issues are very common in the SCCM world. Many times, system admins resolve the issue after analyzing the SCCM Logs.

MEMCM's processes are usually invisible to end-users. Software updates, Configuration Items, Applications, etc., are installed on your computer "in the background.". The speed

of the installation depends on the specifications of the computer.

As an end-user, you don't need to worry about SCCM Logs. The SCCM Logs are here to record the activities of each SCCM thread or component.

All SCCM Logs might get overwritten overtime automatically. You have an option to increase the size of the SCCM logs if required from the components.

There are different types of logs available for SCCM. The different types of **Client, Site Server** (Primary, SQL, CAS, etc.), & Site System Server (DP, MP, SUP, etc.) SCCM Logs.

Once you enable **Debug and Verbose logging** for the client and Server SCCM logs, it provides **additional information** on error conditions. However, you need to be very careful when you enable these settings in production.

SCCM Logs – Viewing Tools

When I started SCCM (SMS) admin job, the SCCM logs reading tool was Trace32.exe. With SCCM 2012 and CB, the default SCCM logs reading tool CMTrace.exe became integrated with the products themselves. You don't have to download it separately. More details [Top SCCM Log File Viewer Options For Admins](#).

- *Trace32.exe (SMS/SCCM 2007)*
- *CMTrace.exe (SCCM 2012 & CB)*
- *CMLogViewer.exe (SCCM CB)*

SCCM Logs Locations

The default client log file location is the **%WINDIR%\CCM\Logs** folder. The SCCM server log files are located in the: Logs D:\Program Files\SMS_CCM\Logs and F:\Program Files\Microsoft Configuration Manager\Logs folder.

Some other log folders are specifically called out in each section like **%Temp%**, **C:\Windows\ccmsetup\Logs**, etc.

Tenant Attach SCCM Logs

You can find the SCCM tenant attached related log files from the following list. You can get a more detailed list of troubleshooting posts on [tenant attach](#); troubleshooting is also available.

- CMGatewayNotificationWorker.log
- AdminService.log

SCCM Log Files Updated List Client and Server

SCCM Upgrade Log Files

You can check SCCM upgrade process log files from the primary site server. F:\Program Files\Microsoft Configuration Manager\Logs.

- **DMPDownloader.log** for SCCM 2006 source file download issues.
- **ConfigMgrSetup.log** for Redist Files Download Issue.

- **CMUpdate.log** for all the upgrade related activities.
- If the update displays as **Downloading** and doesn't change, review the **hman.log** and **dmpdownloader.log** for errors.

SCCM Log Files Updated List Client and Server

Implicit Uninstall SCCM Log

Let's understand the new log file got introduced in the 2107 version of SCCM. This log is for getting track of [implicit uninstall](#).

- **SMS_ImplicitUninstall.log** – Location of log file is at Site Server. The component related to this log file is **SMS_BUSINESS_APP_PROCESS_MANAGER_ImplicitUninstallWorker**.

CMG Remote Control

You can check the [Cloud Management Gateway](#) remote control-related log files in the following location.

- **cmrcviewer.log** under **%temp%** folder.

SCCM Application Approval Process Related Logs

Let's find out the application approval process-related logs if you have issues with the automatic approval process flow.

- SMS_REST_PROVIDER.log
- NotiCtrl.log

Out of Band Hotfix SCCM Logs

You can perform out-of-band hotfix installation-related **troubleshooting** from the following log file.

C:\Windows\Temp ==> **CMRegisterUpdate.log**

Secondary Server

Now it's time to check the log files of the **SCCM secondary site**. Also, you can check the location of the log files, which will help troubleshoot issues with the secondary site installation.

- Check the **ConfigMgrPreReq.log** on the **primary server**.

- Once the prerequisite is completed successfully, Refer the following **logs** on the new **secondary server.smstvc.log** for secondary server installation-related log on secondary server C:\.
 - SMS_BootStrap.log** on secondary server C:\.
 - ConfigMgrSetupWizard.log** is not useful for secondary server installation.
 - ConfigMgrSetup.log** to validate the installation of the secondary server.

SCCM Log Files Updated List Client and Server

SCCM DP Logs

You can find the SCCM Distribution point-related SCCM logs in the following table. You can read more about the installation of the [distribution points](#).

distmgr.log	Package Application distribution process
PkgXferMgr.log	Records the actions of the SMS_Executive component responsible for sending content from an SCCM primary site to a remote DP.

ConfigMgr DP Logs

Apart from DistMgr.log, you will need to refer to the following logs to get the DP installation and Configuration details. **DP Installation** and **Configuration-related Log Files**.

- **Hman.log** – Primary Server – Example – New site system: MEM WIN11DJ.MEMCM.COM SMS Distribution Point
- **DistMgr.log** – Primary or Secondary Server – All the details about the DP installation and Configuration.
- **SMSdprov.log** on remote DP (Windows 11 PC) – Location of the log Drive:\SMS_DP\$\sms\logs.
- **SMSdpusage.log** on remote DP – Monitor the usage of the DP. Location of the log Drive:\SMS_DP\$\sms\logs.
- **SMPXE.log** on remote DP – Helps with PXE responder information.

SCCM MP Logs

You can now look at the [SCCM management point](#) related SCCM logs to troubleshoot and install MP.

mpcontrol.log	Records the availability of the management point every 10 minutes.
MP.MSI.log	More details log about MP installation
mpsetup.log	Installation of Management Point

ConfigMgr MP Logs

SCCM SUP Logs

You can find the [Software Update Point](#) related SCCM logs in the following table. These log files help to troubleshoot and resolve issues about SUP.

SUPSetup.log	Installation Logs for SUP role
WCM.log	Records details about the SUP configuration
WSUSCtrl.log	Records details about the configuration, database connectivity, and health of the WSUS server for the site.
wsyncmgr.log	Records details about the software updates sync process.

ConfigMgr SUP Logs

SCCM Third-Party Patching Logs

The following list of SCCM logs helps you troubleshoot and resolve issues related to [SCCM third party patching](#).

- **SMS_ISVUPDATES_SYNCAGENT.log**
- **Wsyncmgr.log**
- **WCM.log (C:\Program Files\Microsoft Configuration Manager\Logs)**
- **PatchDownloader.log (%temp%)**

Software Update Logs – Patching Related Issues

AlternateHandler.log	Records details when the client calls the Office click-to-run COM interface to download and install Microsoft 365 Apps for enterprise client updates. It's similar to the use of WuaHandler when it reaches the Windows Update Agent API to download and install Windows updates.	Client
ccmperf.log	Records activities related to the maintenance and capture of data related to client performance counters.	Client
DeltaDownload.log	Records information about the download of express updates and updates downloaded using Delivery Optimization.SCCM Logs	Client
PatchDownloader.log	Records details about the process of downloading software updates from the update source to the download destination on the site server.	When downloading updates manually, this log file is located in the %temp% directory of the user running the console on the machine you're running the

		console. For Automatic Deployment Rules, this log file is located on the site server in %windir%\CCM\Logs, if the ConfigMgr client is installed on the site server.
PolicyEvaluator.log	Records details about the evaluation of policies on client computers, including policies from software updates.	Client
RebootCoordinator.log	Records details about the coordination of system restart on client computers after software update installations.	Client
ScanAgent.log	Records details about scan requests for software updates, the WSUS location, and related actions.SCCM Logs	Client
SdmAgent.log	Records details about the tracking of remediation and compliance. However, the software updates log file, Updateshandler.log, provides more informative details	Client

	about installing the software updates required for compliance. This log file is shared with compliance settings.	
Service WindowManager.log	Records details about the evaluation of maintenance windows.	Client
SMS_ISVUPDATES_SYNCAGENT.log	Logfile for synchronization of third-party software updates.	Top-level software update point in the Configuration Manager hierarchy.
SMS_OrchestrationGroup.log	Logfile for orchestration groups	Site server
SmsWusHandler.log	Records details about the scan process for the Inventory Tool for Microsoft Updates.	Client
StateMessage.log	Records details about software update state messages that are created and sent to the management point.	Client
SUPSetup.log	Records details about the software update point installation. When the software update point installation completes, Installation was successful is written to this log file.	Site system server

UpdatesDeployment.log	Records details about deployments on the client, including software update activation, evaluation, and enforcement. Verbose logging shows additional information about the interaction with the client user interface.	Client
UpdatesHandler.log	Records details about software update compliance scanning and the download and installation of software updates on the client.	Client
UpdatesStore.log	Records details about compliance status for the software updates assessed during the compliance scan cycle.	Client
WCM.log	Records details about software update point configurations and connections to the WSUS server for subscribed update categories, classifications, and languages.	Site server
WSUSCtrl.log	Records details about the configuration, database connectivity, and health of the	Site system server

	WSUS server for the site.	
wsyncmgr.log	Records details about the software update sync process.	Site server
WUAHandler.log	Records details about the Windows Update Agent on the client when it searches for software updates.SCCM Logs	Client

SCCM logs List of Logs in the Table

Wake on Lan SCCM logs

Log name	Description	Computer with log file
wolcmgr.log	Records details which clients need to be sent wake-up packets, the number of wake-up packets sent, and the number of wake-up packets retried.	Site server
wolmgr.log	Records details about wake-up procedures, such as when to wake up deployments configured for Wake On LAN.	Site server

Windows 10 or Windows 11 Servicing SCCM logs

You can have more details about Windows 10 (Windows 11) Deployment [Upgrade Process Logs](#) for SCCM Admins. The following SCCM logs will help you troubleshoot Windows 10 and Windows 11 servicing with SCCM.

Log name	Description	Computer with log file
CBS.log	Records servicing failures related to changes for Windows Updates or roles and features.	Client
DISM.log	Records all actions using DISM. If necessary, DISM.log will point to CBS.log for more details.	Client
setupact.log	Primary log file for most errors that occur during the Windows installation process. The log file is located in the %windir%\\$Windows.~BT\sources\panther folder.	

All Credits to Microsoft

WUA Logs

The following tables come with Windows Update Agent-related SCCM logs.

Log name	Description	Computer with log file
WindowsUpdate.log	Records details when the Windows Update Agent connects to the WSUS server and retrieves the software updates for compliance assessment and whether there are updates to the agent components.	Client

All Credits to Microsoft Doc

WSUS Logs

Well, if you want to find out the SCCM logs that are related to WSUS? The below table has two of those.

SCCM Log Files Updated List Client and Server

Log name	Description	Computer with log file
Change.log	Records details about WSUS server database information that has changed.	WSUS server
SoftwareDistribution.log	Records details about the software updates synced from the configured update source to the WSUS server database.	WSUS server

These log files are located in the %ProgramFiles%\Update Services\LogFiles folder.

ConfigMgr Metering Logs

Log name	Description	Computer with log file
mtrmgr.log	Monitors all software metering processes.	Site server

All Credits to Microsoft Doc

Server Side – SCCM Logs

SCCM Server-side logs to troubleshoot server-side issues.

Use the following logs located on the service connection point:

- **CMGatewaySyncUploadWorker.log**
- **CMGatewayNotificationWorker.log**

SCCM Logs FAQs

Let's see the frequently asked questions related to the SCCM Clog files.

Where is the SCCM Server Logs Location?

DRIVE-Letter:\Program Files\Microsoft Configuration Manager\Logs

Where is the SCCM Client Logs Location?

Windows 10 Device – **C:\Windows\CCM\Logs**

What are the DP Logs?

distmgr.log & PkgXferMgr.log

What are the SCCM MP Logs?

mpcontrol.log, MP.MSI.log, and mpsetup.log

What are the SCCM SUP Logs?

SUPSetup.log, WCM.log, WSUSCtrl.log, and wsyncmgr.log

More SCCM Logs Details at one place

General SCCM log files are listed in the following table.

SCCM Logs

adctrl.log

Description

Records enrollment processing activity.

ADForestDisc.log

Records Active Directory Forest Discovery actions.

ADService.log

Records account creation and security group details in Active Directory.

adsgdis.log

Records Active Directory Group Discovery actions.

adsysdis.log

Records Active Directory System Discovery actions.

adusrdis.log

Records Active Directory User Discovery actions.

ccm.log

Records client push installation activities.

CertMgr.log

Records certificate activities for intrasite communication.

chmgr.log

Records activities of the client health manager. SCCM Logs help to identify health issues.

Cidm.log

Records changes to the client settings by the Client Install Data Manager (CIDM).

colleval.log

Records details when collections are

	created, changed and deleted by the Collection Evaluator.
compmon.log	Records the status of component threads monitored for the site server.
compsumm.log	Records Component Status Summarizer tasks.
ComRegSetup.log	Records the initial installation of COM registration results for a site server.
dataldr.log	Records information about MIF files and hardware inventory processing in the SCCM database.
ddm.log	Records activities of the discovery data manager.
despool.log	Records incoming site-to-site communication transfers.
distmgr.log	Records details package creation, compression, delta replication, and information updates.
EPCtrlMgr.log	Records information about the syncing of malware threat information from the Endpoint Protection site system role server with the SCCM database.
EPMgr.log	Records the status of the Endpoint Protection site system role.
EPSetup.log	Provides information about the installation of the Endpoint Protection site system role.
EnrollSrv.log	Records activities of the enrollment service process.
EnrollWeb.log	Records activities of the enrollment

	website process.
fspmgr.log	Records activities of the fallback status point site system role.
hman.log	Records information about site configuration changes and the publishing of site information in Active Directory Domain Services.
Inboxast.log	Records the files moved from the management point to the corresponding INBOXES folder on the site server.
inboxmgr.log	Records file transfer activities between inbox folders.
inboxmon.log	Records the processing of inbox files and performance counter updates.
invproc.log	Records the forwarding of MIF files from a secondary site to its parent site.
migmctrl.log	Records information for Migration actions that involve migration jobs, shared distribution points and distribution point upgrades.
mpcontrol.log	Records the registration of the management point with Windows Internet Name Service (WINS). Records the availability of the management point every 10 minutes.
mpfdm.log	Records the management point component's actions that move client files to the corresponding INBOXES folder on the site server.
mpMSI.log	Records details about the management point installation.

MPSetup.log	Records the management point installation wrapper process.
netdisc.log	Records Network Discovery actions.
NotiCtrl.log	Application request notifications.
ntsvrdis.log	Records the discovery activity of site system servers.
Objreplmgr	Records the processing of object change notifications for replication.
offermgr.log	Records advertisement updates.
offersum.log	Records the summarization of deployment status messages.
OfflineServicingMgr.log	Records the activities of applying updates to operating system image files.
outboxmon.log	Records the processing of outbox files and performance counter updates.
PerfSetup.log	Records the results of the installation of performance counters.
PkgXferMgr.log	Records the actions of the SMS_Executive component that is responsible for sending content from a primary site to a remote distribution point.
polcypv.log	Records are updated to the client policies to reflect client settings or deployments changes.
rcmctrl.log	Records the activities of database replication between sites in the hierarchy.
replmgr.log	Records the replication of files between the site server components and the Scheduler component.

ResourceExplorer.log	Records errors, warnings, and information about running Resource Explorer.
ruleengine.log	Records details automatic deployment rules for the identification, content download, and software update group and deployment creation.
schedule.log	Records details about the site-to-site job and file replication.
sender.log	Records the files that transfer by file-based replication between sites.
sinvproc.log	Records information about the processing of software inventory data to the site database.
sitecomp.log	Records details about the maintenance of the installed site components on all site system servers.
siterectrl.log	Records site setting changes made to site control objects in the database.
sitestat.log	Records the availability and disk space monitoring process of all site systems.
SMS_ISVUPDATES_SYNCAGENT.log	Logfile for synchronization of third-party software updates starting in SCCM version 1806.
SMS_PhasedDeployment.log	Logfile for phased deployments
SmsAdminUI.log	Records SCCM console activity. SCCM logs record activities related to the admin console?
SMSAWEBSVCSetup.log	Records the installation activities of the Application Catalog web service.
smsbkup.log	Records output from the site backup

	process.
smsdbmon.log	Records database changes.
SMSENROLLSRVSetup.log	Records the installation activities of the enrollment web service.
SMSENROLLWEBSetup.log	Records the installation activities of the enrollment website.
smsexec.log	Records the processing of all site server component threads.
SMSFSPSetup.log	Records messages generated by the installation of a fallback status point.
SMSPORTALWEBSetup.log	Records the installation activities of the Application Catalog website.
SMSProv.log	Records WMI provider access to the site database.
srsrpMSI.log	Records detailed results of the reporting point installation process from the MSI output.
srsrpsetup.log	Records results of the reporting point installation process.
statesys.log	Records the processing of state system messages.
statmgr.log	Records the writing of all status messages to the database.
swmproc.log	Records the processing of metering files and settings.
ConfigMgrPrereq.log	Records prerequisite component evaluation and installation activities.
ConfigMgrSetup.log	Records detailed output from the site server setup.

ConfigMgrSetupWizard.log

Records information related to activity in the Setup Wizard.

SMS_BOOTSTRAP.log

Records information about the progress of launching the secondary site installation process. Details of the actual setup process are contained in ConfigMgrSetup.log.

smstsvc.log

Records information about the installation, use, and removal of a Windows service used to test network connectivity and permissions between servers, using the server's computer account that initiates the connection.

DWSSMSI.log

Records messages generated by the installation of a data warehouse service point.

DWSSSetup.log

Records messages generated by the installation of a data warehouse service point.

Microsoft.ConfigMgrDataWarehouse.log

Records information about data synchronization between the site and warehouse databases.

Fsplsapi

Records details about communications to the fallback status point from mobile device legacy clients and client computers.

fspMSI.log

Records messages generated by the installation of a fallback status point.

fspmgr.log

Records activities of the fallback status point site system role.

Ccmlsapi.log

Records client messaging activity on the endpoint.

MP_CliReg.log

Records the client registration activity processed by the management point.

MP_Ddr.log

Records the conversion of XML.ddr records from clients and then copies them to the site server.

MP_Framework.log

Records the activities of the core management point and client framework components.

MP_GetAuth.log

Records client authorization activity.

MP_GetPolicy.log

Records policy requests activity from client computers.

MP_Hinv.log

Records details about the conversion of XML hardware inventory records from clients and the copy of those files to the site server.

MP_Location.log

Records location requests and reply activity from clients.

MP_OOBMgr.log

Records the management point activities related to receiving an OTP from a client.

MP_Policy.log

Records policy communication.

MP_Relay.log

Records the transfer of files that are collected from the client.

MP_Retry.log

Records hardware inventory retry processes.

MP_Sinv.log

Records details about the conversion of XML software inventory records from clients and the copy of those files to the site server.

MP_SinvCollFile.log

Records details about file collection.

MP_Status.log

Records details about the conversion of XML.svf status message files from clients and the copy of those files to the site server.

mpcontrol.log

Records the registration of the management point with WINS. Records the availability of the management point every 10 minutes.

mpfdm.log

Records the management point component's actions that move client files to the corresponding INBOXES folder on the site server.

mpMSI.log

Records details about the management point installation.

MPSetup.log

Records the management point installation wrapper process. SCCM logs help to check the MP setup details.

objreplmgr.log

Records details about the replication of software updates notification files from a parent site to child sites.

PatchDownloader.log

Records details about the process of downloading software updates from the update source to the download destination on the site server.

ruleengine.log

Records details automatic deployment rules for the identification, content download, and software update group and deployment creation.

SMS_ISVUPDATES_SYNCAGENT.log

LogFile for synchronization of third-party software updates starting in SCCM version 1806.

SUPSetup.log

Records details about the software update

	point installation. When the software update point installation completes, Installation was successful is written to this log file.
WCM.log	Records details about the software update point configuration and connections to the WSUS server for subscribed update categories, classifications, and languages.
WSUSCtrl.log	Records details about the configuration, database connectivity, and health of the WSUS server for the site.
wsyncmgr.log	Records details about the software updates sync process.
WUSSyncXML.log	Records details about the Inventory Tool for the Microsoft Updates sync process.
AppIntentEval.log	Records details applications' current and intended state, their applicability, whether requirements were met, deployment types, and dependencies.
AppDiscovery.log	Records details about the discovery or detection of applications on client computers.
AppEnforce.log	Records details about enforcement actions (install and uninstall) taken for applications on the client.
awebsctl.log	Records monitoring activities for the Application Catalog web service point site system role.
awebsvcMSI.log	Records detailed installation information for the Application Catalog web service point site system role.

Ccmsdkprovider.log	Records the activities of the application management SDK.
colleval.log	Records details when collections are created, changed and deleted by the Collection Evaluator.
ConfigMgrSoftwareCatalog.log	Records the activity of the Application Catalog, which includes its use of Silverlight.
NotiCtrl.log	Application request notifications. SCCM logs help to get the details of the notification that client received.
portlctl.log	Records the monitoring activities for the Application Catalog website point site system role.
portlwebMSI.log	Records the MSI installation activity for the Application Catalog website role.
PrestageContent.log	Records details about the use of the ExtractContent.exe tool on a remote, prestaged distribution point. This tool extracts content that has been exported to a file.
ServicePortalWebService.log	Records the activity of the Application Catalog web service.
ServicePortalWebSite.log	Records the activity of the Application Catalog website.
SMSdpmon.log	Records details about the distribution point health monitoring scheduled task configured on a distribution point.
SoftwareCatalogUpdateEndpoint.log	Records activities for managing the URL for the Application Catalog shown in Software Center.

SoftwareCenterSystemTasks.log	Records activities related to Software Center prerequisite component validation.
colleval.log	Records details when collections are created, changed and deleted by the Collection Evaluator.
execmgr.log	Records details about packages and task sequences that run. SCCM logs help to record SMS Agent Host service activities.
AssetAdvisor.log	Records the activities of Asset Intelligence inventory actions.
aikbmgr.log	Records details about the processing of XML files from the inbox for updating the Asset Intelligence catalog.
AIUpdateSvc.log	Records the interaction of the Asset Intelligence sync point with System Center Online (SCO), the online web service.
AIUSMSI.log	Records details about the installation of the Asset Intelligence sync point site system role.
AIUSSetup.log	Records details about the installation of the Asset Intelligence sync point site system role.
ManagedProvider.log	Records details about discovering software with an associated software identification tag. It also records activities related to hardware inventory.
MVLImport.log	Records details about the processing of imported licensing files.
ConfigMgrSetup.log	Records information about setup and recovery tasks when SCCM recovers a site from backup.

Smsbkup.log	Records details about the site backup activity.
smssqlbkup.log	Records output from the site database backup process when SQL Server is installed on a server, not the site server.
Smswriter.log	Records information about the state of the SCCM VSS writer used by the backup process.
Crp.log	Records enrollment activities. SCCM logs related to enrollment activities are going to help us.
Crpcctrl.log	Records the operational health of the certificate registration point.
Crpsetup.log	Records details about the installation and configuration of the certificate registration point.
Crpmssi.log	Records details about the installation and configuration of the certificate registration point.
NDESPlugin.log	Records challenge verification and certificate enrollment activities.

SCCM Log Files Updated List Client and Server

RBAC Related Issues – SCCM Logs

SCCM RBAC-related SCCM logs are available in the below table.

Log name	Description	Computer with log file

Log name	Description	Computer with log file
hman.log	Records information about site configuration changes and the publishing of site information to Active Directory Domain Services.	Site server
SMSProv.log	Records WMI provider access to the site database.	Computer with the SMS Provider

SCCM Logs

SCCM Configuration Manager Client Logs

Let's analyze the ConfigMgr or SCCM client logs from the Windows 10 or Windows 11 device. It's important to understand the log file structure from the client-side for the initial troubleshooting of the [SCCM Tenant attach](#).

Location of the client logs files – C:\Windows\CCM\Logs

Toast Notification Logs

When you have trouble getting **toast notification** from the client-side, you can refer to the following location from Windows 10 ConfigMgr Client.

Log File	Description
SCToastNotification_<domain>@<username>_1.log	Toast Notification – Toast Notification Related Activities are stored here.

ConfigMgr Client Logs Details | SCCM

SCCM Log Files Updated List Client and Server

Endpoint Analytics Logs

You can refer to the following log files related to [endpoint analytics](#) from the Windows 10 client device.

Log File	Description
SystemTempLockdown.log	Endpoint Analytics – Records system temp lock down configuration details
SensorWmiProvider.log	Endpoint Analytics – Records the activity of the WMI provider for the endpoint analytics sensor.
SensorEndpoint.log	Endpoint Analytics – Records the execution of endpoint analytics policy and uploads client data to the site server.
SensorManagedProvider.Log	Endpoint Analytics – Records the gathering and processing of events and information for endpoint analytics.

Log File	Description
SystemPerf.log	Endpoint Analytics – System Performance details are recorded endpoint
ConfigMgr Client Logs Details SCCM	

SCCM Log Files Updated List Client and Server SCCM Log Files Updated List Client and Server

Software Center Logs

This guide section shall help you understand the log files related to Software Center associated tasks.

Log	Description
-----	-------------

Log	Description
SoftwareCenterSystemTasks.log	Software Center – Records activities related to Software Center prerequisite component validation
SCClient_<domain>@<username>_1.log SCClient_MEMCM@anoop_2.log	Software Center – Records the activity in Software Center for the specified user on the client computer
SCClient_<domain>@<username>_1.log SCClient_MEMCM@anoop_6.log	Software Center – Records the activity in Software Center for the specified user on the client computer

SCCM Log Files Updated List Client and Server

Office 365 Related Logs

Office related logs are documented in this section and the **software update** section below.

Log	Description
OfficeAnalytics.log	Office – Office device inventory details

SCCM Log Files Updated List Client and Server

Software Update Logs

This section of the guide shall help you understand the log files related to **Software Update** related tasks.

Log	Description
AlternateHandler.log	Software Updates – Microsoft 365 Apps for enterprise client updates
UpdatesStore.log	Software Updates – Records details about compliance status for the software updates that were assessed during the compliance scan cycle
ScanAgent.log	Software Updates – Records details about scan requests for software updates, the WSUS location, and related actions
UpdatesHandler.log	Software Updates – Records details about software update compliance scanning and the download and installation
StateMessage.log	Software Updates – Records details about software update state messages that are created and sent to the MP
WUAHandler.log	Software Updates – Records details about the Windows Update Agent on the client when it searches for software updates
DeltaDownload.log	Software Updates – Records information about the download of express updates & updates downloaded using DO

SCCM Log Files Updated List Client and Server

PowerShell Script – SCCM Log Files Updated List Client and Server

This section of the guide shall help you understand the log files related to **PowerShell** script-related tasks.

Log

Description

Scripts.log PowerShell Scripts – Run Script Related Activities are recorded here

SCCM Log Files Updated List Client and Server

[ConfigMgr Client Logs Details | SCCM](#)

General SCCM Client Logs

This section covers all the **general categories** of the logs.

Log	Description
CertificateMaintenance.log	General – Maintains certificates for Active Directory Domain Services and MP.
LocationServices.log	General – MP/SUP/DP Details – Records the client activity for locating management points, software update points, and distribution points.
UpdateTrustedSites.log	General – Record Details of trusted sites – Add Default Portal To Trusted Sites.
Ccm32BitLauncher.log	General – Records actions for starting applications on the client, marked run as 32 bit.
CCMSDKProvider.log	General – Records activities for the client SDK interfaces
CcmSqlCE.log	General – Records activities for the SQL Server Compact Edition (CE) that the client uses
Scheduler.log	General – Records activities of scheduled tasks for all client operations
CcmExec.log	General – Records activities of the client and the SMS Agent Host service
CcmMessaging.log	General – Records activities related to communication between the client and MP
SmsClientMethodProvider.log	General – Records activity for sending client schedules
CcmRestart.log	General – Records client service restart activity
CcmEval.log	General – Records Configuration Manager client status evaluation activities
UpdatesDeployment.log	General – Records details about deployments on the client, including software update activation, evaluation, and enforcement
UserAffinity.log	General – Records details about user device affinity

Log	Description
CCMVDIProvider.log	General – Records information for clients in a virtual desktop infrastructure (VDI)
wedmtrace.log	General – Records operations related to writing filters on Windows Embedded clients
StatusAgent.log	General – Records status messages that are created by the client components

Hi Anoop, I need a clarification where I am unable to access the C\$ of the client machines in most of the machines across the environment(Gets access Denied error). Any suggestions are much appreciated.

Thank you in Advance!
